CII/CPAR

How to Send Encounters to Alberta Netcare (optional) PS Suite EMR

November 2021

PS Suite Data Mapping

Data that Maps to Alberta Netcare CED and the Healthcare Data Repository

In the CII project there are two places that information will be pulled to within Alberta Health:

🟥 **= Alberta Netcare (CED) and Healthcare Data Repository** - information is securely shared with other providers can see this information as it is published in the CII Community Encounter Digest (CED) report and copied to the Healthcare Data Repository.

🟦 **= Healthcare Data Repository only** - information uploaded to the Health Care Data Repository is not visible or published.

Patient Demographics
- Name
- PHN
- Date of Birth
- Gender
- Postal Code

Provider Information
- First Name
- Last Name
- Provider ID
- Provider Expertise (Clinician Type)

In the CII project there are two places that information will be pulled to within Alberta Health:

🟥 **= Alberta Netcare (CED) and Healthcare Data Repository -** information is securely shared with other providers can see this information as it is published in the CII Community Encounter Digest (CED) report and copied to the Healthcare Data Repository.

🟦 **= Healthcare Data Repository only -** information uploaded to the Health Care Data Repository is not visible or published.

Location Information

PS Suite EMR Fields that flow to the CED in Alberta Netcare

Conditions that allow for Encounter information to flow to the CED in Alberta Netcare

PS Suite determines if an encounter is valid to submit to CII if the encounter is:

- ✓ Attached to a provider who is live on CII.

- ✓ NOT marked private.

- ✓ In a patient's chart that is NOT marked as private.

- ✓ Marked as finished (no yellow bar).

Note: a previously created visit note that is updated, will also be updated in Alberta Netcare.

Keeping Encounters Confidential – Option One

You can prevent health information from being sent to Alberta Netcare by entering the information in a field or format that will not be sent to Alberta Netcare. For example:

1. Vitals entered in a visit note without the proper syntax will not flow to Alberta Netcare:

|	(Dx: 250.21)	BM	(25/02/21 10:33)
☐ Feb 10, 2021			
Blood pressure: 160/98			
High blood pressure a concern - check again in 3 months.			

2. Problems without an attached ICD-9 code will not flow to Alberta Netcare:

diabetes...

htn

# Keeping Encounters Confidential – Option Two

You can prevent health information entered into a mapped field from being sent to Alberta Netcare by making patient data private or confidential:

1. An entire patient's chart may be masked. In the patient record, choose Patient > Set Privacy Level for This Patient.

2. A specific encounter note or profile item. In the patient chart, click in the note or profile item and choose Patient > Modify Note Privacy or Modify <profile item> Privacy.

Workflow Tips – Details Field

- 'Details' field = **Reason for the Visit**.

  - Alberta Netcare, PS Suite Searches, and HQCA Reports all pull the Reason for the Visit from this field.

- TIP: Use a standardized list of appointment reasons to populate this field.

  - Create a standardized list as a clinic.
  - Save the list on each computer desktop.
  - Copy and paste appointment reasons directly from the list into the 'Details' field.

Workflow Tips – Comments Field

Use the 'Comments' field to track patient information that does not change over time

- E.g., step parent/foster parent names or reason for initial consult

Workflow Tips – Appointment Alerts

- Use this field for alerts about a specific appointment.

  - E.g., 'will be late' or exam room number.

- Appointments with an alert have (!!) before the patient's name and can be seen by:

  1. Hovering over the appointment to show the alert message in a pop up.
  2. Right-clicking on the appointment – the alert will be in the second line of the box that pops up.
